Work Experience

iOS Software Engineer II

Booking.com

Nov 2021–Present

Amsterdam, Netherlands

- Rewrote and modernized multiple outdated parts of the post booking flow from Objective-C to **Swift** and using modern architecture and frameworks.
- Implemented **Flexible to Reschedule** feature that allows guests to modify the dates of their non-refundable bookings once without charges which led to a huge increase in the number of non-refundable bookings.
- Ported the Room Upgrade feature to native implementation which used to be a web view. This change led to an increase in the number of upgrades.
- Designed the **technical solution** and implemented the Horizontal version of the room list that made it much easier to compare different rooms and rates which led to an increase in guests booking more expensive rates since it was easier to differentiate rates.
- Audited, triaged, and fixed many accessibility issues in the room selection flow to comply with **European Accessibility Act** before the deadline.
- Initiated and led the project to unify display of meals across apps as a prerequisite to another project that required showing a more detailed version of the included and available meals in a booking.

iOS Tech Lead

Snapp!

Mar 2018–Mar 2021

Tehran, Iran

- Created a **scalable app architecture** using **protocol-oriented** programming and Clean Architecture principles after studying app architectures such as VIPER, Uber RIBs, MVVM and Clean Swift. ([Link](#))
- Initiated, planned and worked on the project of **migration** of legacy code of Passenger app from Objective-C and MVC to **Swift** and the new architecture. ([Link](#))
- Led the **rewrite** project of the Driver app from Objective-C and MVC to Swift, based on an overhaul of the application from design and usability standpoints. ([Link](#))
- **Designed and architected** the technical part of many impactful features across both Passenger and Driver apps such as Chat, Change Destination, Area Gateways and the transition to being a super app offering multiple services.
- **Automated release process** using Xcode Server and GitLab CI/CD which decreased QA lead time by 1 hour. ([Link](#))
- Enabled product-based team structure by setting up **release train** processes so teams could work on the same code base independently resulting in smaller and regular releases every two weeks.
- Hired and **led a team of 12** during the scale-up phase by interviewing 100+ candidates.
- **Mentored** less experienced employees in both engineering and leadership career paths.
- Spearheaded the effort on **diversity and inclusion** by hiring the first female developer in the engineering team.

iOS Developer

Snapp!

May 2017–Feb 2018

Tehran, Iran

- Architected the **map framework** which was later used in both Passenger and Driver apps.
- Adapted all the custom views of the app to Safe Area after the launch of iPhone X. ([Link](#))
- **Designed the API** for our in-house network module. ([Link](#))
- Added support for **Multitasking on iPad**.

iOS Developer

Lyan

2016–2017

Tehran, Iran

iOS Developer

Freitag & Co

Summer 2016

Frankfurt, Germany

iOS Developer

Nazdiktarinha

2015–2016

Tehran, Iran

Education

- **B.Sc. Computer Engineering**, Sharif University of Technology, Tehran.

2011–2017

Languages and Technologies

- Languages: Swift, Objective-C, Python3, JavaScript
- Technologies: SwiftUI, Combine, UIKit, Auto Layout, Xcode Server
- Other: iOS App Architecture, GitLab CI/CD, Git, Code Signing

Projects

- **SNPArchitecture** is a scalable iOS app architecture used for iOS apps in Snapp! based on VIPER, RIBs and Clean Swift. ([Link](#))
- **iOS App Signer** is a fork of a project with the same name which I modified to accommodate our team needs in Snapp!. ([Link](#))

Writing & Talks

- A post on why we decided to rewrite the Passenger app in Snapp! and the challenges we faced during the rewrite process. ([Link](#))
- A post on iPad's 10th anniversary. ([Link](#))
- An introduction and a demo on SwiftUI in Farsi. ([Link](#))
- A short talk on the basics of Code Signing in Farsi. ([Link](#))

Interests

- Apple and technology in general.
- Playing racket sports such as Tennis, Padel, Squash.
- Watching (and nerding about) Formula 1.
- You can find me on the internet using the regular expression `behda+d: behda{2}d@GitHub | behda{2}d@LinkedIn | behda{1}d@Medium | behda{1}d@StackExchange | behda{8}d@Instagram`.
